

TCE - KES Excel Import & Export Tool

This Python application provides a graphical interface for importing, updating, and exporting project data from Excel files. It is designed to streamline the management of project timelines and audit trails for the **KES (Key Execution Schedule)** system.

Features

- **Import Functionality:**
 - Load and compare Excel files from a selected folder against a master tracker.
 - Automatically update the master file with new or changed data.
 - Maintain an audit trail of all changes with timestamps and user information.
 - Create backups before any modifications.
- **Export Functionality:**
 - Export project data grouped by:
 - Project
 - Action Owner
 - Installation Contractor
 - Exported files are saved in timestamped folders for easy tracking.

How to Use

- **Run the Script**
 - This script is intended to be packaged into an .exe and run that way.
- **Importing Data**
 - Select the Master Excel File.
 - Select the Folder containing project Excel files.
 - Click Start Import to process and update the master file
- **Exporting Data**
 - Export by Action Owner
 - Export by Project
 - Export by Installation Contractor
- The tool will generate separate excel files for each group in a timestamped folder

File Structure

- **Master File:** Must contain sheets:
 - KES DATES – main project data
 - Audit Trail – logs of changes

- **Import Files:** Excel files with matching structure to the master file

Safety & Logging

- All changes are logged in the Audit Trail sheet.
- Backups are created before any write operations.
- Errors during processing are logged and shown in the console and GUI.

Notes

- Ensure all Excel files are closed before running the tool.
- The tool assumes consistent column names across all files.
- Designed for internal use in project tracking environments.

Support & Issues

If you encounter any issues, bugs, or have suggestions for improvements, please reach out via one of the following methods:

-  **Email:** ryan.jones3@macegroup.com
-  **Issue Tracker:** I will build a form for this to help keep track of any issues, and to make it more simple to report.
-  **Logs & Backups:** Check the *backups/* folder for recovery files in case of unexpected behavior, logs for reporting issues and/ or debugging can be found in the "Logs" folder.

When reporting an issue, please include:

- A brief description of the problem
- Steps to reproduce the issue
- Any error messages shown
- Screenshots (if applicable)
- The version of Python and operating system you're using

Thank you for helping improve this tool!
